

# Mitigation and Bill Review

## A Nationwide Provider of Claims Solutions

The immediate actions you take after a disaster directly affect recovery time and repair costs. The opportunity to save your property from further damage or total loss is greatest within the first 72 hours. Without loss mitigation measures, that opportunity can be lost. Whether it be fire, flood, wind, hail, tornado, hurricane, collapse, collision, mold remediation, or freeze, **American Consulting Group** will be able to help you to minimize the overall cost and ensure you are able to retain property value.

As an independent advisor, **American Consulting Group** brings strength and stability to your situation by determining cause, extent, and duration of damages. We evaluate reparability, period of restoration, extent of damages, schedule delays, and all associated repair costs.

### ● We Ensure the Following 5 Key Activities Are Properly Executed:

1. **Isolation of damaged or contaminated areas:** Sectioning-off contaminated or damaged areas to prevent cross-contamination, enabling unaffected areas to remain operational, contributing to the resumption of operations and the safety of your staff.
2. **Relocation of property:** Moving critical or sensitive equipment to a clean and controlled environment so that loss mitigation measures can be easily and effectively implemented.
3. **Pre-cleaning of surfaces:** Pre-cleaning of vulnerable building surfaces, and the exterior / interior of machines and equipment, to lower contamination potential.
4. **Protection of mechanical and building components:** Application of preservers to prevent further deterioration of mechanical components and other exposed metallic surfaces. Applying anti-microbial agents to prohibit further growth.
5. **Protection of electrical, electronic or optical components:** Prevention of further damage to electrical, electronic or optical components by installing air movement and dehumidifiers to reduce humidity and stabilize the interior environment.
